$1,000 in each strategy

Repository: georgeredo, branch `claude/lucid-heisenberg-bpyq7k`. **Built:** 2026-10-23 by `research_notes/FINAL REPORT/build/thousand.py`, from the trade lists of `FINAL_RESEARCH_REPORT.md` (14a30a7).

What this is. Every row of the final report's page-1 table (`FINAL_RESEARCH_REPORT.md`, commit 14a30a7), each on the same strategy, instrument and period as listed there, started with **$1,000** and walked through its own trades in date order. The trades are the report's own (its loaders in `build/`); nothing was re-tested, re-priced or fetched.

Method A, "all in each day". Each session, the whole balance is split equally across that session's trades. Each slice earns that trade's return in the row's own unit (% of premium paid, % of max risk, % of the credit received, % of the cash set aside, or % of notional, as the table uses). The balance compounds session by session. A trade can lose more than 100% of its unit (a short straddle, or a credit loss bigger than the credit), and a session whose only trades are long options that all expire worthless loses 100%; if a session takes the balance to zero or below, the row is **wiped out** on that date and stops.

Method B, "10% per trade". Each trade uses 10% of the balance at the start of its session. When a session has more than ten trades, each uses 100% ÷ the number of trades, so a day never uses more than the whole balance. It compounds the same way. On a session with ten or more trades, B uses the whole balance too, so a row that always trades ten or more a session ends the same under A and B.

For both. Fractional contracts are allowed. That is not realistic: $1,000 often cannot buy one real SPXW contract, or post the margin on a short straddle or strangle, and short-premium rows would need far more than $1,000 in a real account. Costs are already inside each trade's return, as the study ran it. There are no taxes, no margin interest and no slippage beyond the study's own fills. A trade is booked on its entry session (the trade lists carry the entry date only), so a trade held for days or weeks is treated as if its money came back the same day. "Worst point" is the lowest balance under method A and its date ("start" if it never fell below $1,000).

In plain words. These are what each strategy did over its own study period, not a forecast of what it will do next. Most rows lose: 61 of 75 end below $1,000 under method A (29 of them wiped out) and 53 of 75 under method B. The big gains come from short-premium and spread rows (5 of the 14 that end above $1,000 under A, led by #20a), whose real-account margin or cash $1,000 could not post; the other 9 are 7 stock rows with small gains, the vendor's own Epoch 1 cards and a five-session preview.

Page 1. Every row, sorted by the method A ending balance

—	#3 George engine audit: the phase 1 reproduction audit of #1–#2	—	—	—	not available — the audit produced no trades of its own; its trade files are #2’s, byte for byte (see #2).	not available	—	Reproduced
—	#9c Lifecycle Tier I, daily tier, L-A3, H-FLO (by configuration)	—	—	—	not available — committed as configuration-level cells (grid_by_setup.csv, cells.csv); the trade rows are in the scratchpad (lifecycle/archive, 281 MB) and were …	not available	—	0 promoted

#	strategy	instrument	period	trades	ending $ (A)	ending $ (B)	worst point (A)	verdict from the report
—	#10 ATM straddle samples and the independent short-premium prereg (branch …	—	—	—	not available — price samples only (no trade with an exit); the pre-registered study never ran.	not available	—	No result
—	#11 Price-action catalogue and atlas (43 names)	—	—	—	not available — descriptive tables, no trades.	not available	—	Descriptive; V6 tested its levels
—	#12 Step 1: every 0DTE contract broken down	—	—	—	not available — a contract inventory, no trades.	not available	—	Descriptive.
—	#14 Step 3: 108 exits × 9 conditions	—	—	—	not available — committed as per-rule summaries (exits.csv, exits_best.csv); the per-trade paths are committed but the exit grid was not re-run here.	not available	—	Nothing made money in a way that held up; a −50% stop shrank …
—	#16 Step 5: the runner model (model A/B) and its top 1% picks	—	—	—	not available — the picks are committed as daily sums (top1_daily.csv), not trades.	not available	—	Runners partly separable
—	#18 Compass engine audit (six module groups)	—	—	—	not available — the audit committed row-level paths and events (paths_*.parquet, events_*.parquet) and per-cell tables; its exit stacks were scored by cell, and no …	not available	—	No directional rule survives after fees. What holds
—	#22 Phase 2 hyp D: volatility breakout (straddles on the model’s top decile)	—	—	—	not available — committed as cells by scan minute and decile (cells_*.csv, minutes_*.parquet); no trade list of the pre-registered cell.	not available	—	No edge
—	#24 Phase 3 hyp E: short-premium lift of the vol model’s quiet deciles	—	—	—	not available — committed as by-scan cells and pooled tables; the candidate was set after the OOS read (see #26 condor_d20 for its trades).	not available	—	No edge established — not pre-registrable

#	strategy	instrument	period	trades	ending $ (A)	ending $ (B)	worst point (A)	verdict from the report
—	#26d Paper tracker: fly_spxw (SPX ±5 / ±25 flies)	—	—	—	not available — a one-week sanity run outside the repository; no rows were kept.	not available	—	Run only as a one-week sanity run outside the repository; replaced …
—	#29f Picker: flow gate and grade check	—	—	—	not available — one session of flow (5 trades) and the vendor’s own recorded returns (see #1, vendor-recorded).	not available	—	Flow gate
—	#30f Compass features VN1 (venue SPY vs SPXW) and BC3 (V1 + X3 + D6)	—	—	—	not available — VN1 pairs venues and BC3 needs the D6 direction feature; both are computed inside the study’s screen code, and their per-trade arms are not on disk.	not available	—	PASS
—	#36 Edge H5 (SPY − SPXW late straddle) and H6 (monthly put spreads), forward only	—	—	—	not available — forward-only: no trade exists. Every metric (trades, win rate, mean, interval, drawdown, by year) is “not available” because no forward session has …	not available	—	No verdict.
—	#38 Edge H9: overnight drift (forward only, withdrawn)	—	—	—	not available — forward-only: no trade exists. Every metric (trades, win rate, mean, interval, drawdown, by year) is “not available” because no forward session has …	not available	—	No verdict.
—	#39 Compass scanner (score ≥ 80, SPY/QQQ/IWM 0DTE)	—	—	—	not available — signal-only: the gate failed before any option was priced, so trades, win rate, average win/loss, biggest win/loss, profit factor, drawdown, top-5 …	not available	—	FAIL at the gate

#	strategy	instrument	period	trades	ending $ (A)	ending $ (B)	worst point (A)	verdict from the report
—	#42 George A+ entry + EMA targets	—	—	—	not available — the run was stopped before its prereg was committed; no file exists on disk or in history, so every metric is not available.	not available	—	Never run.
—	#44 Compass EMA: the owner’s three EMA / ORB models	—	—	—	not available — the run was stopped before computing: a partial engine and a session list exist in the scratchpad (compass_ema_partial/), no signal, trade or P&L.	not available	—	Never computed.
—	#45 DR-GCE gates 1 and 2 (Mode 1 Gamma Vacuum Squeeze)	—	—	—	not available — signal-only: touch outcomes (signals.csv, gate2_pairs.csv), never traded to an exit; no P&L metric exists.	not available	—	Gate 1 PASS
—	#46 Trend-day test	—	—	—	not available — never run (the trend-day share is only described in step 6).	not available	—	Never registered, never run.

Counts. Above $1,000 at the end: 14 of 75 rows under A, 22 under B. Wiped out: 29 under A, 6 under B. The 20 studies at the foot of the table have no trade list with usable per-trade returns.

Every row in full

Return unit is the row’s own. “Sessions” counts the sessions with at least one trade. Max drawdown is the largest fall from a running peak of the balance, in %.
